

Indian Myna Capture Sheet Monitoring and Recording Resident Data Sheets

Prior to trapping for the first time please ensure you fill in the monitoring sheet on the Indian Myna Capture Monitor Sheet. Monitoring and trapping can be undertaken at the same time.

Count the maximum number of Indian Mynas you can see within a 100 m radius of the trap of your property, including birds flying over at any one time during each week, record in a calendar. Decide on the area you are going to survey and stick to it from then on. Include only observations from within or over this area.

Try to do your count when the sun is visible in the sky and not during foggy, very windy or raining conditions.

Establishing some monitoring data may assist you to determine when it is best to place your trap and provide some statistics to your community action group or council.
